

Bitra Token

Introduction

We came to life as Turkey's first crypto project.

We cannot go without saying that we are in a leading position.

IF OPPORTUNITY ISN'T KNOCKING, BUILD A DOOR.

We're here to find a solution to a worldwide problem, not just crypto.

WE ARE NOT JUST COINS, BE PATIENT.

We continue our adventure as bep-20 token, smart contract on BinanceSmartChain, which everyone knows to be the strongest and most reliable network.

Are you aware of what your worst nightmare might be in a time when even money is digitalized?

WHAT MATTERS IS NOT THE TOKEN, BUT WHAT IT WAS CREATED FOR.

YES!

Cyber security

IF YOU ARE AN INDIVIDUAL, IT IS MORE IMPORTANT TO YOU

Let's set up a company for ourselves to explain more easily. For example, let's call it Delta.

PAST IS PAST. IT'S TIME TO ACT.

What if I don't care about security in my company?

It's going to happen

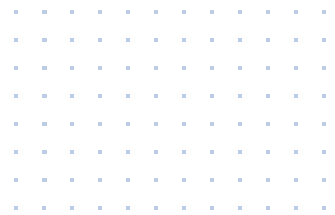

- Loss of Money
Loss of Prestige
 - Morale Loss
 - Loss of Confidence
 - Labor Loss
- and perhaps loss of life...

It's like it's starting to turn into a black page instead of a white page, doesn't it?

We're just getting started

THEREFORE

BugSpace

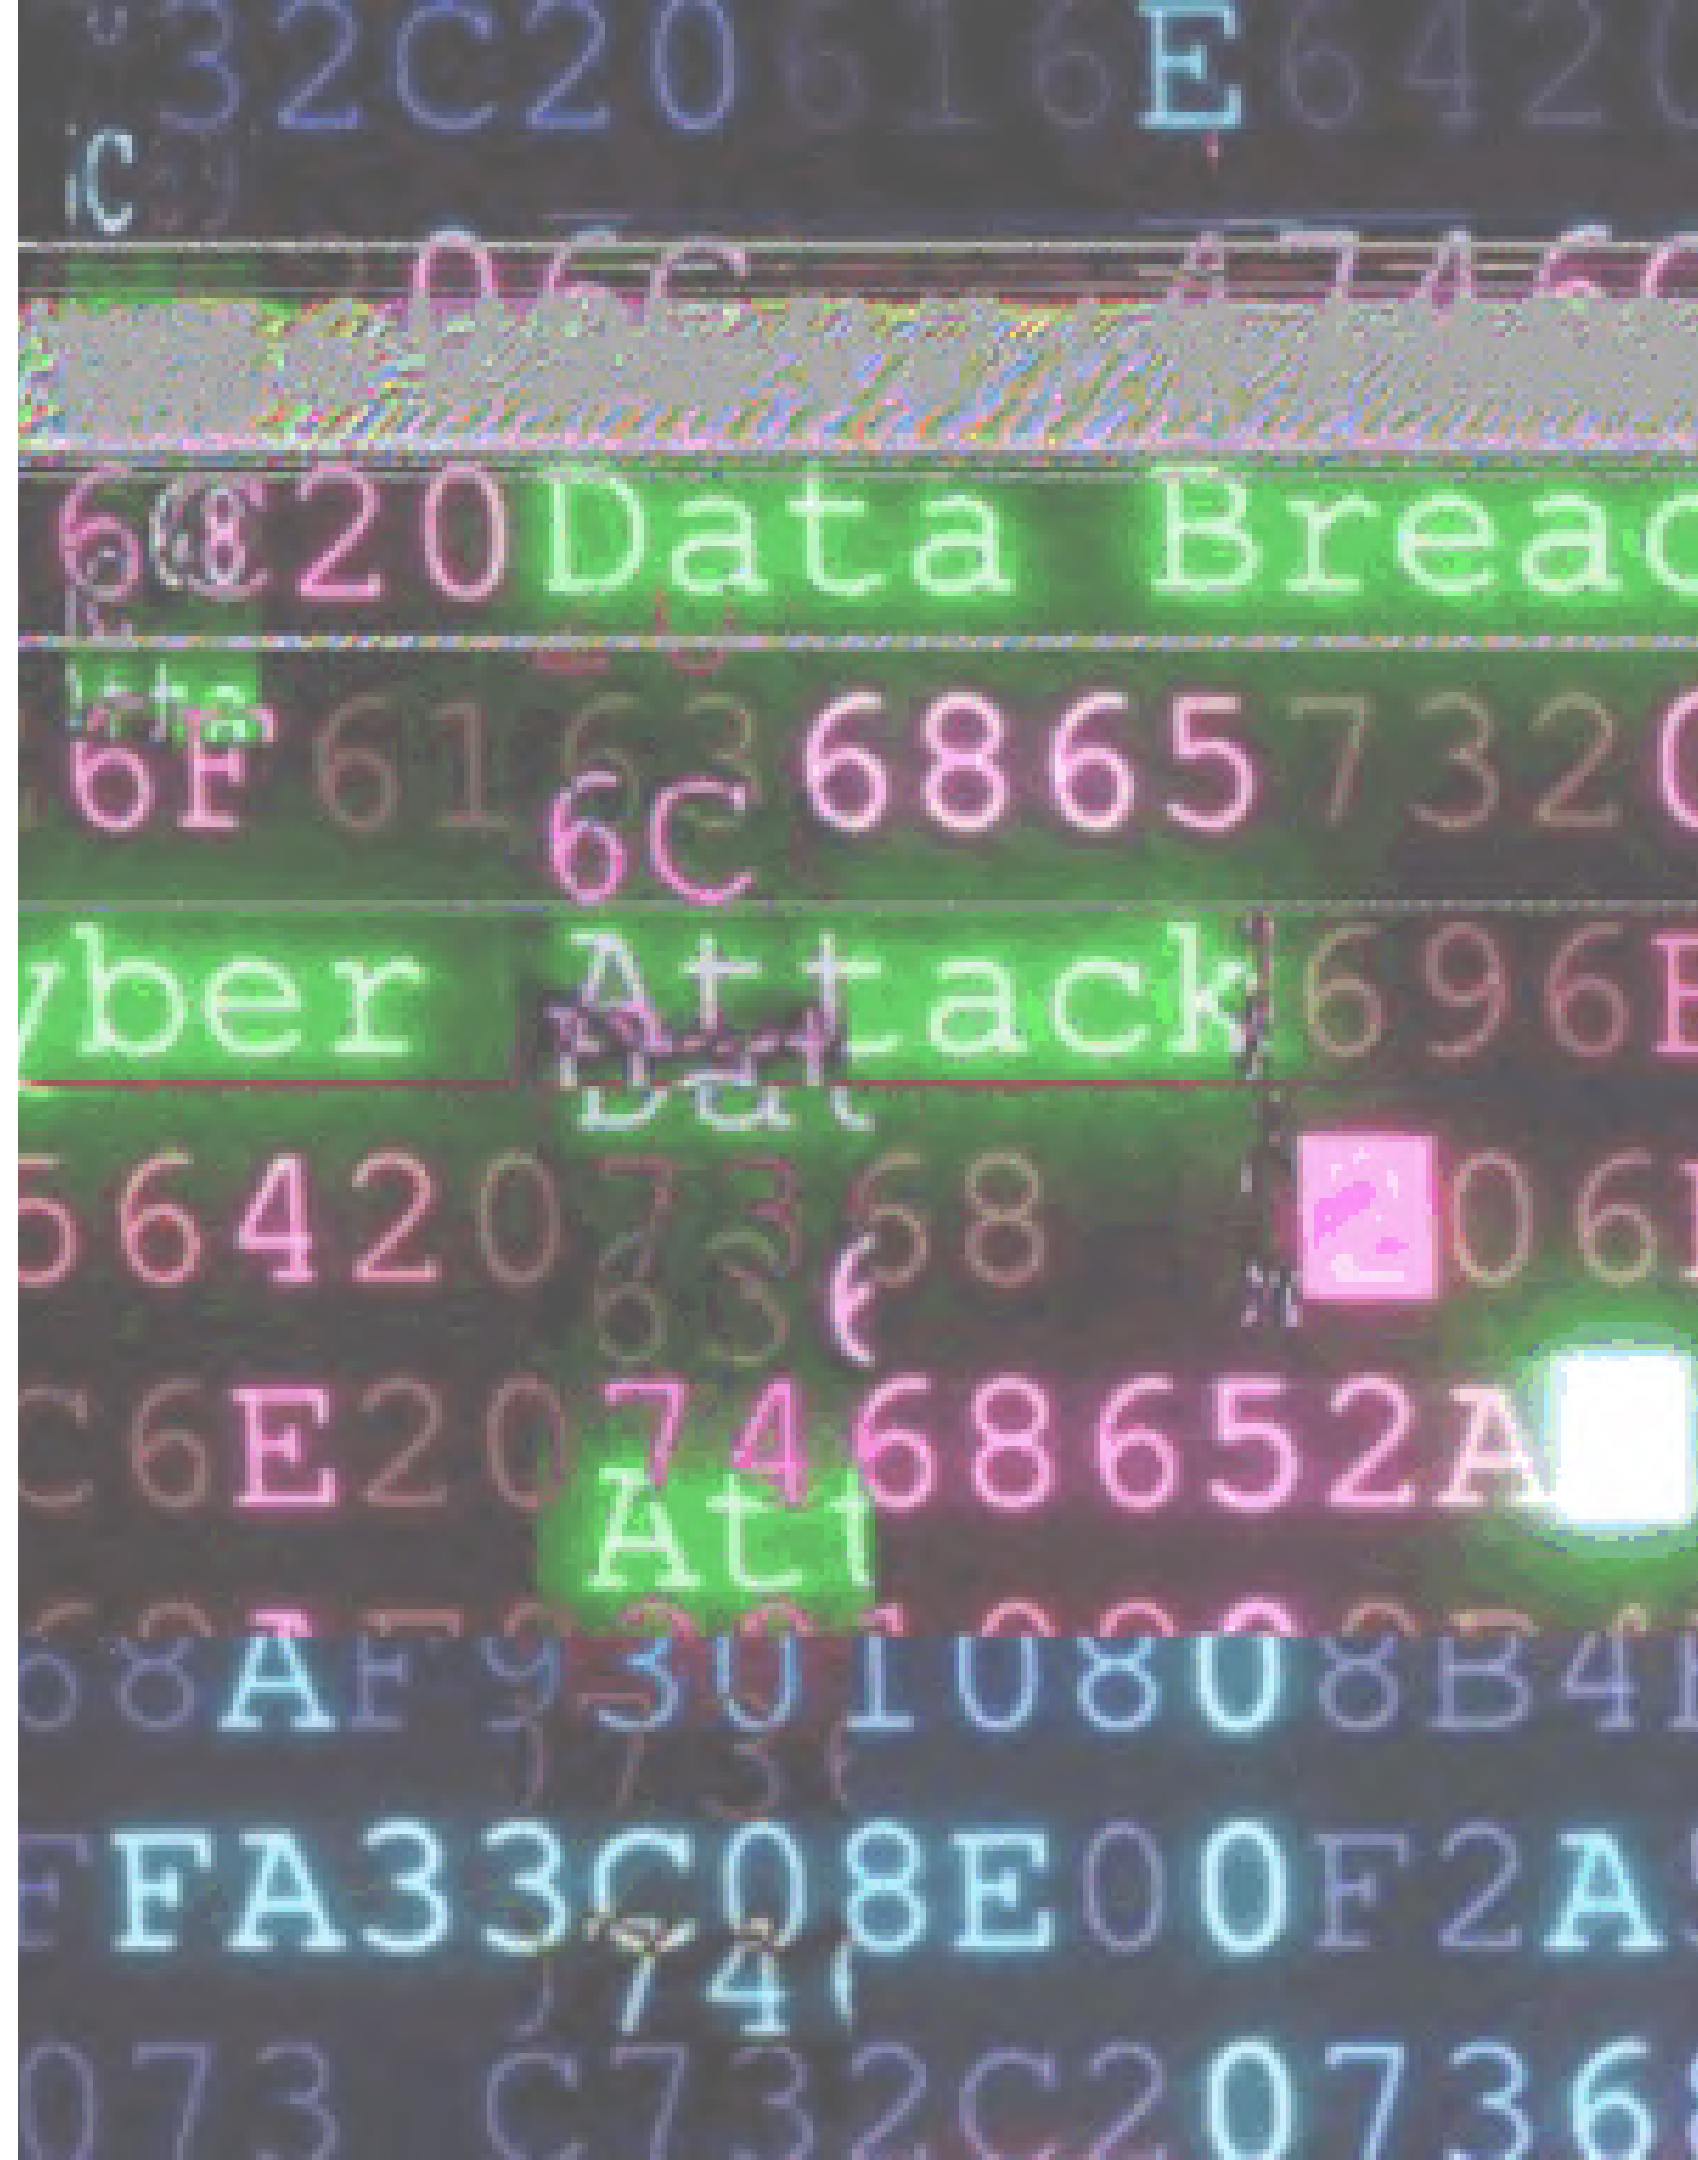

**Let's briefly explain the technical
infrastructure**

BUGSPACE.io

The bugspace project, which is the main project and the reason for Bitra Token, tries to benefit the whole world. The BugSpace project is simply a bug-hunter rewarding platform.

In this way, companies register in 5 minutes and the areas they specify in our system are examined by thousands of cyber security experts 24/7, problems are found and reported.

Today, many people urgently need this system, including exchanges and *blockchains*.

**Yes, this system already exists.
But we have our difference**

We convert reports to NFT so that only the company can see them. At the same time, we do justice to the name of security by preventing third parties from interfering in this way.

By using Bitra tokens for payments, we aim to achieve high volume on exchanges and maintain circulation at all times.

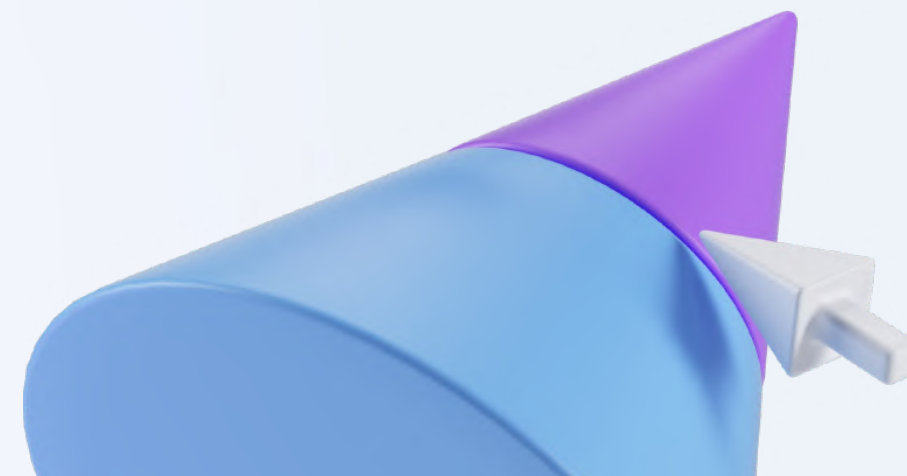

ALTHOUGH OUR EXEMPLARY COMPANY IS DELTA'S CYBER SECURITY TEAM, UNFORTUNATELY

“Fighting the community requires community.”

In order for companies to be audited, they must always put bitra in the prize pool and buy from the exchange.

It must be replenished as the pool balance decreases. In this way, we always maintain sustainability, as the cybersecurity expert will exchange every bitra token he earns.

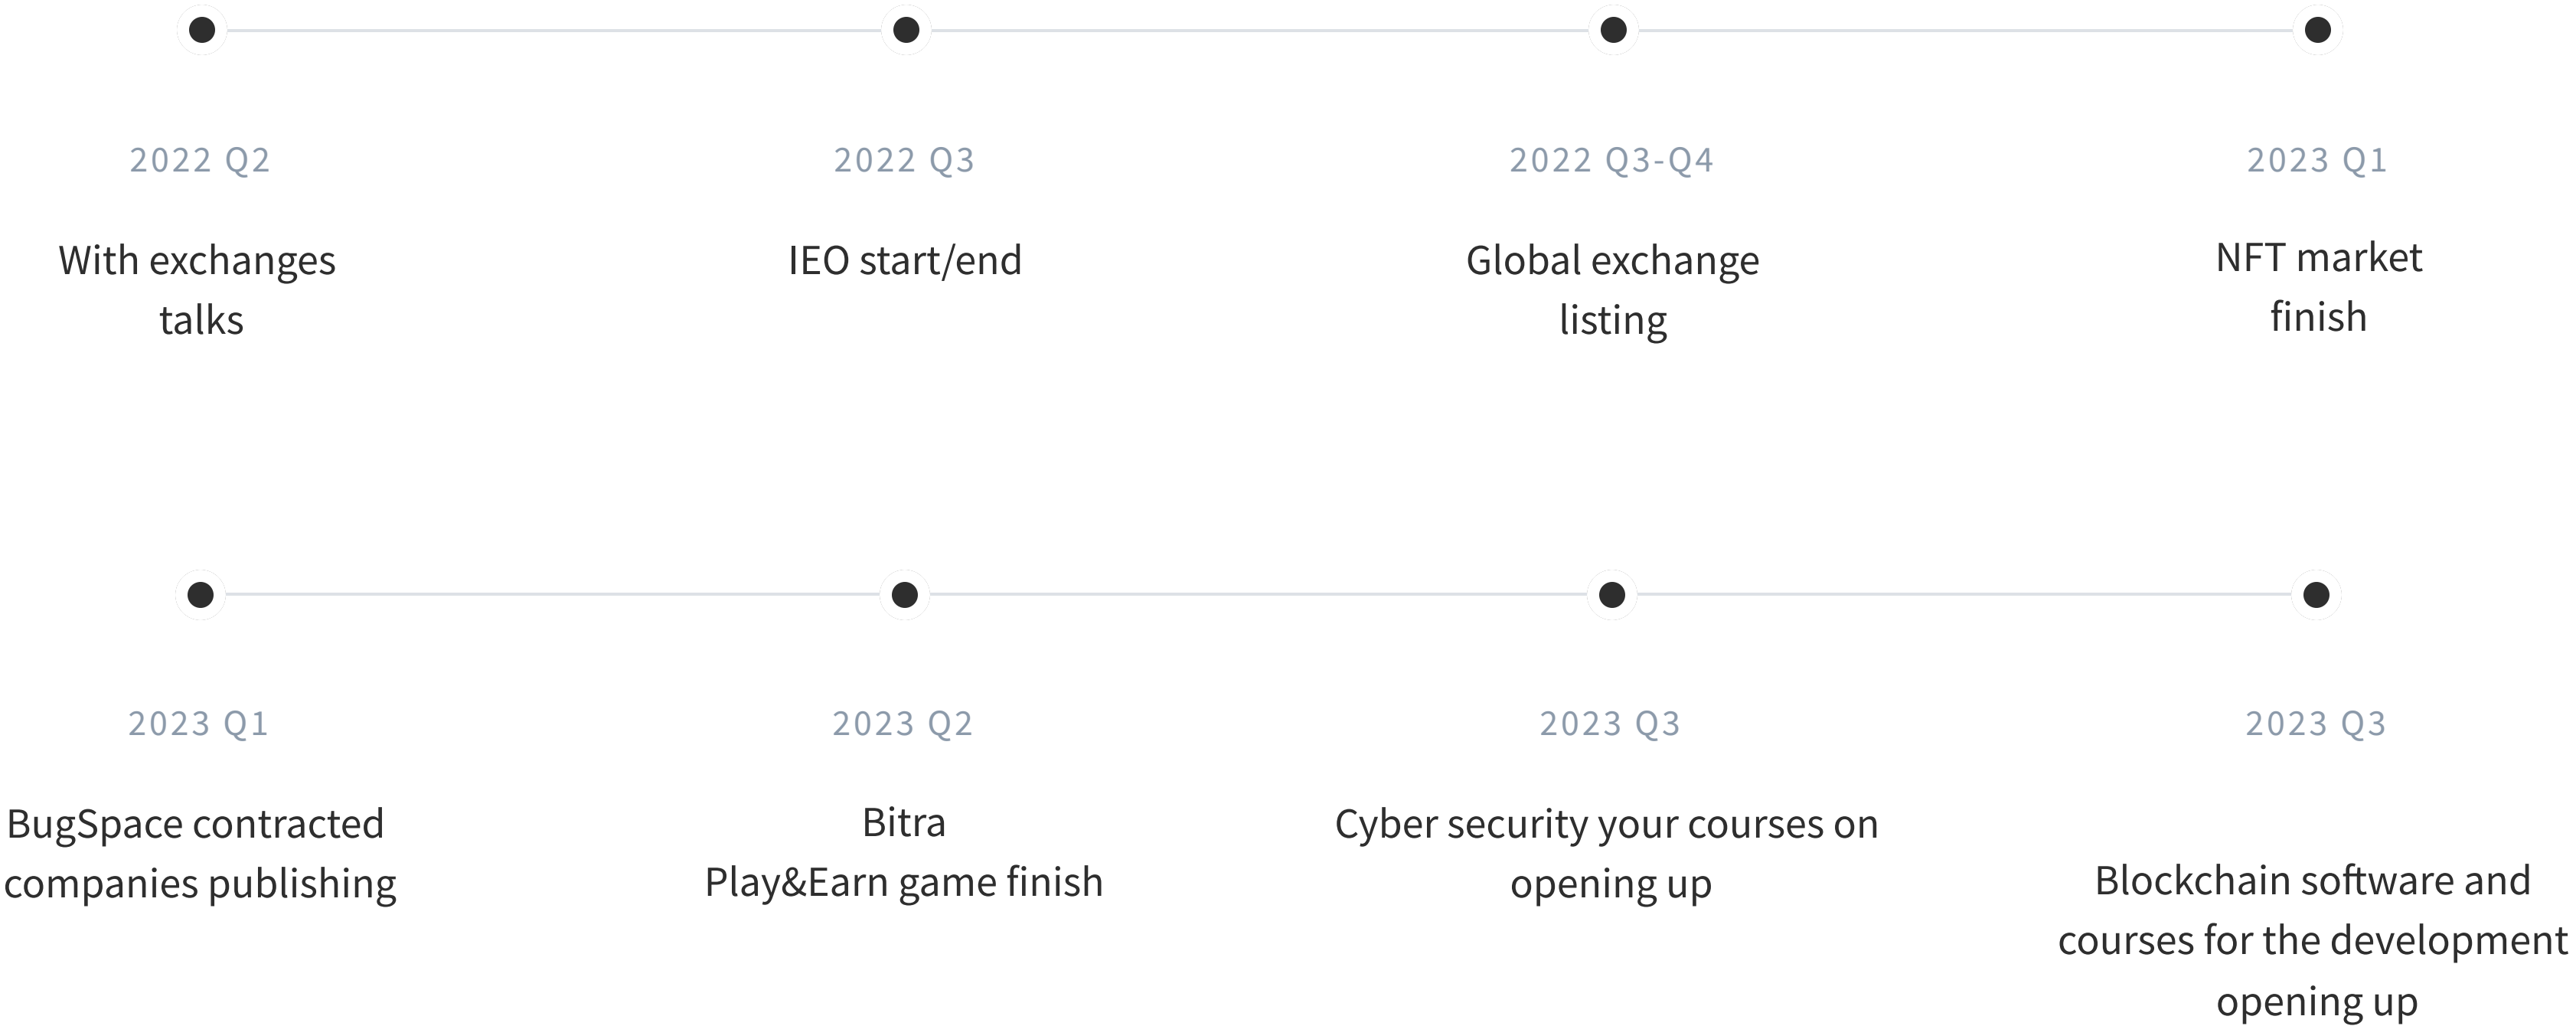

Changing time

We strive to create a world where companies are not burdened and users' credentials or money are not stolen.

Bitra Token is just a tool. The main goal is not money, but to increase the importance of cyber security.
